HeirRight Real Estate

Discovery Call #3 — Pain Points, Anchors & Close Tactics

Client: Joshua Hernandez | Proposal: $5,450 | Date: April 22, 2026

THE REAL COST OF MANUAL WORK

HOURS PER WEEK ON MANUAL RESEARCH
15–25 hrs
Per operator, clicking through 5–8 county portals

COST OF ONE LOST DEAL
$15K–$50K
Average wholesale assignment fee in Miami-Dade probate

LEADS LOST TO DELAY
40–60%
Competitors contact heirs first; speed wins probate

ANNUAL MANUAL LABOR COST (JOSHUA + 1 VA)
$18K–$32K
At $15–20/hr, 20–30 hrs/week, 52 weeks

> **Value Anchor:** At $5,450, the system pays for itself if it prevents *one* lost deal in the next 12 months. It also reclaims 15–25 hours per week permanently.

JOSHUA'S STATED PAIN POINTS

- **"Streamline our processes"** = He knows the workflow is fragmented. County site → spreadsheet → phone → notes → repeat. No single source of truth.
- **"Help us scale"** = He wants to add volume without adding headcount. Current process is linear: one person = one throughput ceiling.
- **"Sources we use"** = He already pays for data (skip trace, county access). The problem is extraction speed and connective tissue between sources.

UNSTATED PAIN POINTS (READ BETWEEN THE LINES)

- **Cash flow sensitivity.** Probate deals have long cycles. Joshua needs deal velocity to keep the lights on. Slow lead gen = cash gaps.
- **No pipeline visibility.** He cannot tell his team "call these 50 people today" with confidence. Every day starts with "what did I find yesterday?"
- **Reputation risk.** Calling the wrong heir, calling too late, or sounding uninformed damages trust in a tight-knit community.
- **Competition is getting faster.** Other wholesalers are buying lists. Joshua is hand-researching. The gap is widening.

OBJECTION HANDLING

"I need to think about it / talk to my partner"

"Totally fair. Here's what I would think about if I were you: every week this isn't running, you're manually researching what a machine could do in 20 minutes. At 20 hours a week, that's 80 hours a month. What's your hourly worth?"

Tactic: Anchor to weekly time loss, not the lump sum. Get a specific follow-up date. "Let's circle back Thursday at 3pm — that gives you 48 hours and keeps our kickoff slot for next Monday."

"The price is still high for me right now"

"I get it. Let me ask directly: if this system brought you one extra deal in the next 90 days, would it be worth it?" [Pause] "One deal at even a conservative $15K fee covers this three times over. And that's just one deal. The system runs every week."

Tactic: Never defend the price. Pivot to deal math. $5,450 is one lost wholesale fee. Also remind him: no recurring fees, no lock-in, he owns the IP. This is a capital expense, not a subscription.

"I can just hire a VA to do this cheaper"

"You absolutely can. A VA at $8/hr, 25 hours a week, is $800/month. In 7 months you've spent $5,600 and you still don't have a pipeline, scoring, or document automation. And if that VA quits, you start over. This is a machine that doesn't call in sick and improves every week."

Tactic: Compare total cost of ownership over 6–12 months. VA = recurring + training + turnover. System = one-time + permanent.

"What if the counties change their websites?"

"That's exactly why we built this with Playwright and adapter-based architecture. If a county changes, we update one adapter file — not the whole system. And that's covered in your 30-day support window. After that, maintenance is minimal because the core engine is stable."

Tactic: Show technical competence without jargon. "Adapter file" sounds simple and contained. Emphasize the 30-day buffer.

"Two weeks feels fast. What if it's not ready?"

"Two weeks is the build. Then we enter forward testing — 30 to 60 days of live operation where I'm monitoring, tuning, and fixing anything that comes up. You're not alone on day 15. I'm with you through the first real deals."

Tactic: Reframe 2 weeks as "build + live testing." The 30–60 day forward ops period is the safety net. He won't feel abandoned.

DISCOVERY QUESTIONS TO ASK LIVE

- "Walk me through yesterday. How many county sites did you check, and how long did it take?" **[Quantify pain]**
- "Of the leads you found last month, how many did you actually contact?" **[Reveal pipeline leakage]**

- "When you lose a deal to a competitor, do you usually know why?" **[Surface speed/tracking pain]**
- "If you had 100 pre-scored, contactable leads every week, what would you do differently?" **[Vision sell]**
- "What's your current cost per deal, all-in?" **[ROI anchor]**
- "If we started Monday, what's the first thing you'd want to see working?" **[Prioritize his urgency]**

CLOSING SIGNALS TO WATCH FOR

- **GREEN LIGHT:** He starts talking about "when we start" instead of "if we start."
- **GREEN LIGHT:** He asks about payment method or timing.
- **GREEN LIGHT:** He mentions specific deals or properties he wants to feed into the system.
- **YELLOW FLAG:** He keeps asking for more features. *Response:* "That's a Phase 2 add. Let's get the core engine live first, then we can layer that in."
- **RED FLAG:** He goes silent on price and changes topic. *Response:* Direct ask: "Does the investment line up with where you want to take the business?"

IF HE PUSHES BACK ON PRICE (FINAL OPTION)

> **Do not go below $4,950.** That is the floor. If he needs it, frame it as a "fast-action discount" valid only if he commits on the call:
>
> "If you're ready to move today, I can lock in a fast-action rate at $4,950. That's $1,300 off the original scope. But I need a yes on this call — it's the only way I can hold the engineering slot for next week."

CALL OBJECTIVE

> **One thing:** Get a commitment to kickoff. Not "think about it." Not "send me more info." A date and a payment method.
>
> The proposal is already sent. He knows the scope. This call is to remove doubt and make the decision easy.
